TERUMO AORTIC

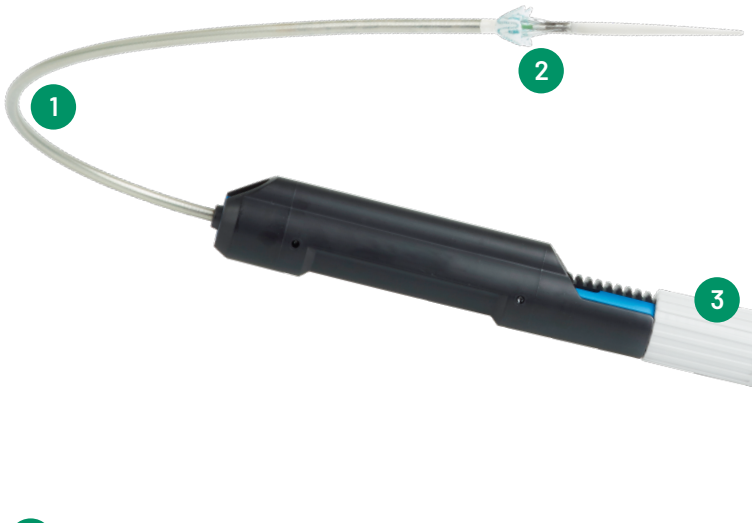
The Next Evolution of EVAR is Here

Intuitive mechanical advantage for controlled, precise deployment

100%
Technical Success [1]
(at index procedure, 150/150 cases)

1 Introducer Sheath

Low profile sheath (18/19 Fr) with hydrophilic coating and Flexible tip for easier navigation



Repositionable in both the cranial and caudal directions to ensure precise marker alignment

2 Proximal Clasping

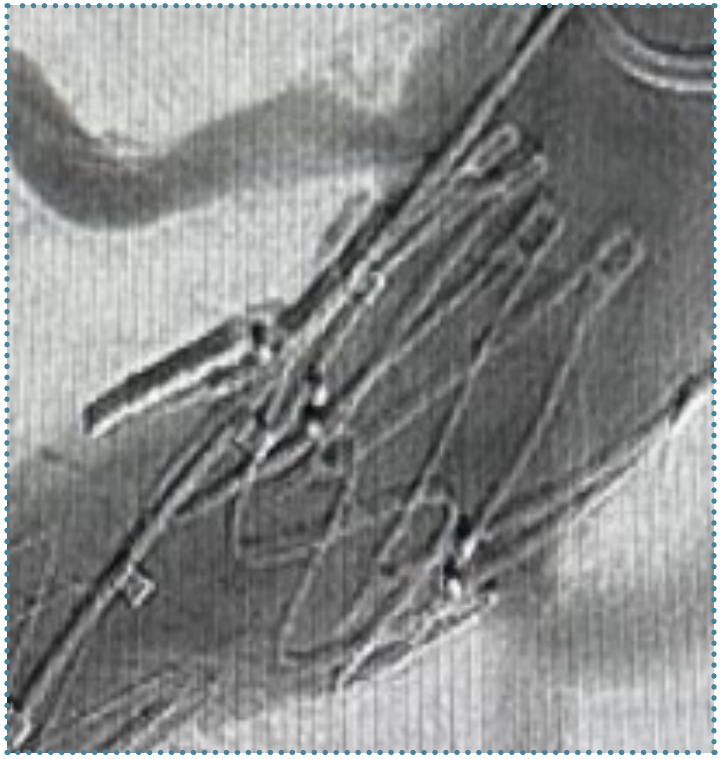
The clasp mechanism keeps control on the deployment and allows cranial and caudal adjustment before the bare stent is released for precise placement

3 Precise Delivery System

The mechanical deployment provides controlled and stable stent-graft deployment

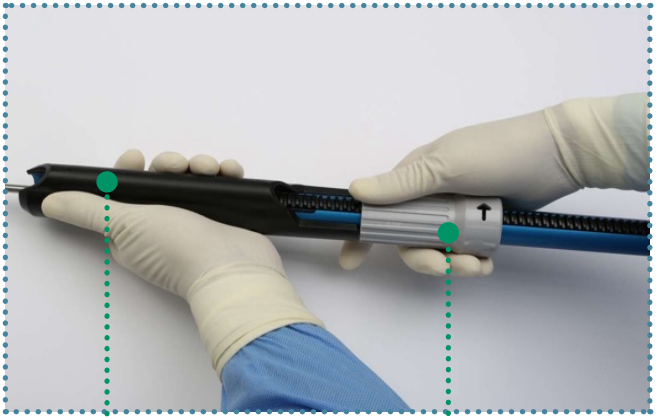
1. TREO U.S. IFU

TREO's design optimised for precise positioning at the level of the renal arteries



0.8%
Type Ia endoleak at 1Y [2]
(1/133)

Mechanical Advantage → Controlled, precise deployment



"The device may be repositioned until the proximal clasp is released reducing the risk of proximal misdeployment and improving the accuracy of landing the device below the renal arteries" [3]
