### The Next Evolution of EVAR is Here Intuitive mechanical advantage for controlled, precise deployment

3

#### Introducer Sheath

Low profile sheath (18/19 Fr) with hydrophilic coating and Flexible tip for easier navigation **100%** Technical Success <sup>1</sup> (at index procedure, 150/150 cases)

> Repositionable in both the cranial and caudal directions to ensure precise marker alignment

#### **Proximal Clasping**

The clasp mechanism keeps control on the deployment and allows cranial and caudal adjustment before the bare stent is released for precise placement

#### Precise Delivery System

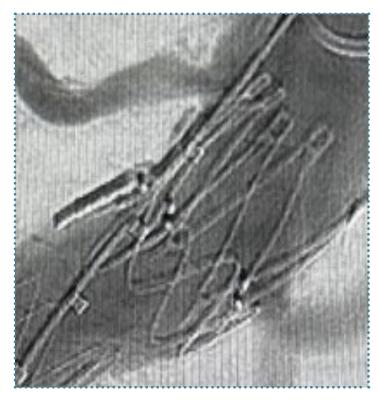

The mechanical deployment provides controlled and stable stent-graft deployment

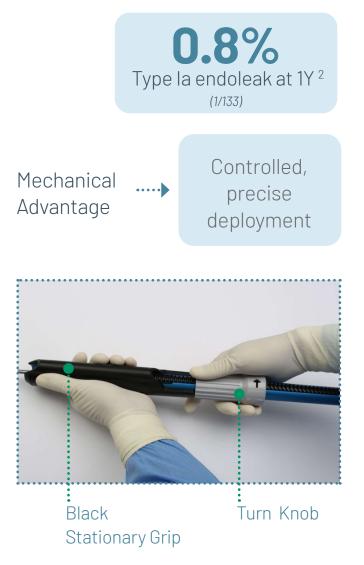

2

# TREO's design optimized for precise positioning at the level of the renal arteries

<sup>66</sup>The device may be repositioned until the proximal clasp is released reducing the risk of proximal misdeployment and improving the accuracy of landing the device below the renal arteries <sup>99 3</sup>
